

Daily Work Report (9-Hour Shift)

Employee Details:**Employee Name:****Shambhavi G****Employee ID:****Department / Team: IT****Date: 07-07-26****Shift Time: 9hrs**

Task Summary (Hourly Breakdown)

Time Slot	Task Description	Start Time	End Time	Duration	Status (Done / Pending)
9:30-12:30	On boarding and documentation process	9:30	12:30	3hrs	Done
12:30 – 1:00	Continued analyzing the Gunicorn and Nginx servers	12:30	1:00	30 mins	Done
1:00 – 1:45	Lunch Break	1:00	1:45	45 mins	Done
1:45 – 2:30	Began the production deployment process using Gunicorn and investigated SSH connectivity issues encountered while reconnecting to the EC2 instance for further server configuration. Performed troubleshooting by validating EC2 instance health, security group rules, public IP configuration, and network connectivity to identify the root cause of the SSH timeout.	1:45	2:30	45 mins	Done

2:30-2:50	Meeting with the manager (discussed regarding work updates)	2:30	2:50	20 mins	Done
2:50–04:00	Successfully re-established SSH access to the EC2 instance and continued deployment activities. Installed and configured Gunicorn as the WSGI server for the Flask application. Verified successful execution of the Flask application using Gunicorn. Created and configured a systemd service for Gunicorn to enable automatic startup on server boot.	02:50	04:00	1hr 10mins	Done
04:00 -05:00	Successfully re-established SSH access to the EC2 instance and continued deployment activities. Installed and configured Gunicorn as the WSGI server for the Flask application. Verified successful execution of the Flask application using Gunicorn. Created and configured a systemd service for Gunicorn to enable automatic startup on server boot.	04:00	05:00	1hr	Done
5:00 – 6:00	Tested secured API endpoints and confirmed that JWT authentication is functioning correctly by receiving the expected "Missing Authorization Header" response for protected endpoints. Began end-to-end validation of deployed API endpoints and identified a route mismatch resulting in a 404 Not Found response, which	05:00	06:00	1hr	Completed

	will be investigated further.				
--	-------------------------------	--	--	--	--

Detailed Work Summary:

Conducted additional endpoint validation and identified a 404 Not Found response for one of the tested URLs, indicating a possible route or Blueprint URL mapping mismatch. Began troubleshooting the routing configuration to verify endpoint registration and ensure all APIs are correctly exposed through the production server.

Overall, successfully completed the major production deployment activities, including AWS server configuration, Gunicorn setup, systemd service configuration, Nginx reverse proxy setup, deployment verification, and authentication validation. The remaining work involves validating API route mappings, performing complete end-to-end API testing through Postman, and finalizing the production deployment.

Issues Faced / Roadblocks ((If any technical or operational issues occurred) Support Needed:

No Blockers Currently

Next Day Plan:

Verify all API routes and Blueprint URL mappings in the deployed application.

Resolve the endpoint routing issue causing the 404 response.

Perform end-to-end API testing through Nginx using Postman.

Validate JWT authentication flow with login and protected endpoints.

Complete the production deployment verification and finalize project documentation.

Self-Evaluation: (Productivity Level: Low / Medium / High

High

Supervisor Remark: (To be filled by reporting manager)
